Re: Software Engineering Intern at Apple

Dear Hiring Manager,

I am writing to you today to apply for the Software Engineering Intern role at Apple. After reviewing my application, I believe you will find me an exemplary candidate for this position based on my technical experience and interpersonal skills.

To introduce myself, my name is Tejas Kamtam. I am a 2nd year Computer Science and Business Economics (double-major) student at the University of California, Los Angeles (UCLA). I am currently looking for internship roles for the summer of 2023 in the field of Machine Learning and related software engineering divisions.

In my current position as a Backend Developer for Innexgo, a startup based out of San Jose, I have gained experience integrating databases with frontend applications using industry-leading tools and technology. Similarly, from across my positions as chief engineer of the Bruin Spacecraft Group, machine learning researcher of 50 Whales, and quantitative analyst at Bruin Stock Group I have worked with numerous programming languages and frameworks including React, Rust, Python, TensorFlow, PyTorch, and PostgreSQL.

However, I am most pleased to have been able to enjoy working alongside a few of the most brilliant minds of our generation. The projects we have spearheaded and the connections I have made in the industry only excite me for the challenges and people that I will meet next. I aspire to gain a similar level of exhilaration in solving the puzzles I am faced with as a software engineer and in doing so I expect to only further my respect for such a prestigious firm as Apple.

Thank you for considering my application and I hope to hear back from you in the coming days.

Sincerely,
Tejas Kamtam
